Details

A unique, simple design with emphasis on durability, reliability and good functionality under any circumstances.

The main parts, the carrier and the locking mechanism are made from high quality steel and have been subjected to heat treatments for maximum resistance to strain and wear even under poor lubrication conditions. The air piston holder plate is made of a special alloy and the air pistons-cylinders are made of brass and aluminum which makes them resistant to the wear and corrosion to the moisture created by the use of compressed air.

This locker is delivered “as is” (empty) without the differential gears. Factory-fitted gears are not suitable for this locker so one set of the gears from the models below must be used. As an additional service we can supply them to you at a preferential price.

Suitable gears: Vitara rear, SJ-413 rear, Samurai rear, Jimny rear.

An electromagnetic air valve, air connection fitting, air hose and an electric switch with LED indication are supplied with the locker.

It is necessary to purchase the fitting air compressor in order to be able to operate this product.
One air compressor is suitable for the use in two lockers.

Units in box: 1
