Details

A unique, simple design with emphasis on durability, reliability and good functionality under any circumstances.

The main parts, the carrier and the locking mechanism are made from high quality steel and have been subjected to heat treatments for maximum resistance to strain and wear even under poor lubrication conditions. The air piston holder plate is made of a special alloy and the air pistons-cylinders are made of brass and aluminum which makes them resistant to the wear and corrosion to the moisture created by the use of compressed air.

The differential gears used in this locker are that of LADA factory differentials. This means that the carrier is delivered empty and that all internal components of the original differential must be placed inside it together with two additional pinions which are not included in this kit.

An electromagnetic air valve, air connection fitting, air hose and an electric switch with a LED indicator are supplied together with the locker. This set includes two adaptors so side gears with 22 and 24 spline can be used as well as two new bearings for the carrier.

It is necessary to purchase the fitting air compressor in order to be able to operate this product.

One air compressor is suitable for the use in two lockers.
